

Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

1. (Currently Amended) A document process system ~~for reading a document, a photograph, a drawing, or the like, and registering/transmitting read data as an electronic document into a plurality of document management systems,~~ the system comprising:

input ~~section~~ means for inputting a condition for dividing/~~coupling~~ the a read electronic document and reconstructing the electronic document, and document registration information;

document division/~~coupling~~ process ~~section~~ means for dividing/~~coupling~~ the electronic document read by a single operation, on the basis of the condition input by the input ~~section~~ means; and

a buffer for temporarily storing the electronic document divided/~~coupled~~ by the document division/~~coupling~~ process ~~section~~ means, ~~and the document registration information input by the input section; and~~

~~document register process section for executing document registration to a predetermined one of said document management systems on the basis of the electronic document and the document registration information stored in the buffer.~~

2. (Currently Amended) The A document process system according to claim 1, wherein said input ~~section~~ means is provided with a display ~~section~~ for inputting the condition for dividing/~~coupling~~ the read electronic document and reconstructing the electronic document, and the document registration information.

3. (Currently Amended) The A document process system according to claim 1, wherein said document division/~~coupling~~ process ~~section~~ means divides/~~couples~~ the electronic document read by a plurality of operations, on the basis of the condition input by the input ~~section~~ means .

4. (Currently Amended) The A document process system according to claim 1, wherein said document division/~~coupling~~ process ~~section~~ means comprises a division/~~coupling~~ process ~~section~~ means, a division/~~coupling~~ set process ~~section~~ means, and a division/~~coupling~~ inquire process ~~section~~ means.

5. (Currently Amended) The A document process system according to claim 4, wherein said division/~~coupling~~ set process ~~section~~ means sets/~~registers~~ division/~~coupling~~ information on the basis of the condition input by the input ~~section~~ means.

6. (Currently Amended) The A document process system according to claim 5, wherein said division/~~coupling~~ process ~~section~~ means divides/~~couples~~ the electronic document on the basis of the division/~~coupling~~ information set/~~registered~~ by the division/~~coupling~~ set process ~~section~~ means.

7. (Currently Amended) The A document process system according to claim 6, wherein said division/~~coupling~~ inquire process ~~section~~ means executes a process to prompt information input where the information input is required at a time of a process execution in the division/~~coupling~~ process ~~section~~ means.

8. (Currently Amended) The A document process system according to claim 13 4, wherein said buffer is a buffer for use in dividing/~~coupling~~ the electronic document in a process of registering the electronic document into the document management system.

9. (Currently Amended) The A document process system according to claim 1, wherein said document register process ~~section~~ means executes document registration to said plurality of document management systems on the basis of the electronic document and the document registration information stored in the buffer.

10. A document process system ~~for scanning a document, a photograph, a drawing, or the like, and registering/transmitting an acquired scan document as an electronic document into a plurality of document management systems, the system comprising:~~

a division/~~coupling~~ set information input/output ~~section~~ means for setting a condition for dividing/~~coupling~~ the a scan document and reconstructing a document;

a division/~~coupling~~ set information database for storing the set condition;

a division/~~coupling~~ set process ~~section~~ means for storing the condition set by an operator through the division/~~coupling~~ set information input/output ~~section~~ means into the division/~~coupling~~ set information database; and

a division/~~coupling~~ process ~~section~~ means for executing a division/~~coupling~~ process for the scan document by referring to contents in the division/~~coupling~~ set information database,

wherein the document is divided/~~coupled~~ on the basis of the condition preset through the division/~~coupling~~ set information input/output ~~section~~ means and stored in the division/~~coupling~~ set information database.

11. (Canceled)

12. The A document process system according to claim 10, for scanning a document, a photograph, a drawing, or the like, and registering/transmitting an acquired scan document as an electronic document into a plurality of document management systems, the system comprising:

~~a division/coupling set information input/output section for setting a condition for dividing the scan document and registering the divided scan documents into a plurality of document management systems;~~

~~a division/coupling set information database for storing the set condition;~~

~~a division/coupling set process section for storing the condition set by an operator through the division/coupling set information input/output section into the division/coupling set information database; and~~

~~a division/coupling process section for executing a division/coupling process for the scan document by referring to contents in the division/coupling set information database,~~

wherein the document is divided/coupled to be registered/transmitted to a the plurality of document management systems, on the basis of the condition preset through the division/coupling set information input/output section means and stored in the division/coupling set information database.

13. (New) The document process system according to claim 1, further comprising

a document register process section for executing document registration to a predetermined one of a plurality of document management systems on the basis of the electronic document and the document registration information stored in the buffer.

14. (New) A document process system comprising:

input means for inputting a condition for coupling a read electronic document and reconstructing the electronic document, and document registration information;

document coupling process means for coupling the electronic document read, on the basis of the condition input by the input means; and

a buffer for temporarily storing the electronic document coupled by the document coupling process means.

15. (New) The document process system according to claim 14, wherein said document coupling process means couples the electronic document read by a plurality of operations, on the basis of the condition input by the input means.

16. (New) The document process system according to claim 14, wherein said document coupling process means comprises a coupling process means, a coupling set process means, and a coupling inquire process means.

17. (New) The document process system according to claim 14, further comprising:

document register process means for executing document registration to a predetermined one of a plurality of document management systems on the basis of the electronic document and the document registration information stored in the buffer.

18. (New) A document process system comprising:

a coupling set information input/output means for setting a condition for coupling a scan document and reconstructing a document;

a coupling set information database for storing the set condition;

a coupling set process means for storing the condition set by an operator through the coupling set information input/output means into the coupling set information database; and

a coupling process means for executing a coupling process for the scan document by referring to contents in the coupling set information database,

wherein the document is coupled on the basis of the condition preset through the coupling set information input/output means and stored in the coupling set information database.

19. (New) The document process system according to claim 18, wherein the document is coupled to be registered to a plurality of document management systems, on the basis of the condition set through the coupling set information input/output means and stored in the coupling set information database.

20. (New) The document process system according to claim 1, further comprising:
a scanner for reading a document and generating the electronic document.

21. (New) The document process system according to claim 1, wherein the electronic document divided by the document division process means is stored in the buffer as a plurality of separate and distinct electronic documents.
